

Put all your best photos and memories in one place... for safekeeping.

SOFTIMELINE® easily builds **INTERACTIVE PICTORIAL TIMELINES.**

Create the visual history of any organization, subject, or person... on your PC.

With Softimeline, you'll create an interactive viewing experience, not the traditional linear presentation of a slide show or a scrapbook.

This software organizes information by categories, chosen by you. The headings stay on screen at all times, while scrolling vertically reveals more thumbnail photos, and allows you to move forward or back in time.

Designs and templates are supplied, so you just add photos and memories; even sound and video!

While most people can't write a story, Softimeline allows anyone to create content, just by putting events in the appropriate category, in the right order. The viewer decides the order in which they are experienced.

You'll build Event Pages like this, using dozens of supplied templates, with text placeholders and picture boxes. Softimeline runs under Windows including Intel based Macs; best of all, it's only \$79, and you needn't to be an artist or a computer expert to use it!

IT'S ABOUT TIME.
Click any thumbnail photo to open its page.
Then move forward or back in time, in that category ...or return to the Home page.

The multiple timelines on the main screen create a visual table of contents, from which interactive links are obvious to the user. Now you view information a new way... seeing events in context.

Easily build a pictorial history of anything that interests you...

- The History of your Family... your Community... your Team
- A Corporate Profile • A Military Episode • A Diary
- Vacation Memories • A Medical History • Legal Evidence
- An Employment Resume • Investments • Archaeology
- Science • Astronomy • Planning a screenplay or book
- The Environment • Use PowerPoint slides as Event Pages
